

A transit of Venus over the disk of the Sun will occur on June 5-6. The entire transit will be visible in eastern Asia, eastern Australia, northwestern North America, the Arctic, and the north Pacific Ocean.

The times provided in the following tables are given provisionally in Universal Time, using $\Delta T(A) = +67\text{:}0$. Once the value of ΔT is known, the data on these pages may be expressed in Universal Time as follows:

Define $\delta T = \Delta T - \Delta T(A)$, in units of seconds of time.

Change the times given in provisional Universal Time by subtracting δT .

Apply the correction $0.00417807 \delta T$ to the longitudes in such a way that if δT is positive, the longitudes shift to the east.

Leave all other quantities unchanged.

Longitude is positive to the east and negative to the west.

GEOCENTRIC PHASES

		Position Angle P		Venus being in the Zenith in	
		d h m s	°	Longitude °'	Latitude °'
Ingress, exterior contact	June	5 22 09 40.6	40.7	-152 34.1	+22 52.0
Ingress, interior contact		5 22 27 28.7	38.2	-157 02.3	+22 51.8
Least angular distance		6 01 29 35.9		+157 13.5	+22 49.5
Egress, interior contact		6 04 31 42.8	292.7	+111 29.3	+22 47.2
Egress, exterior contact		6 04 49 30.9	290.1	+107 01.1	+22 46.9

Least angular distance: $9' 14''$

The position angle P of the point of contact is reckoned from the north point of the limb of the Sun towards the east as viewed at the geocenter.

The position angle V of the point of contact, reckoned from the vertex of the limb of the Sun towards the east, is found by:

$$V = P - C$$

where C , the parallactic angle, is given by:

$$\tan C = \frac{\cos \phi' \sin h}{\sin \phi' \cos \delta - \cos \phi' \sin \delta \cos h}$$

in which ϕ' is the geocentric latitude of the place, δ is the declination of the Sun, and h is the local hour angle of the Sun; $\sin C$ has the same algebraic sign as $\sin h$.
